

commercial rebate program case study

LOCATION

Country Village Towers, Spring Valley, N.Y.

RESIDENCE TYPE

184 unit apartment complex

TYPICAL WATER USAGE

214 gallons per day | 14,347,000+ gallons annually

**Based on 2017 water audit*

WATER EFFICIENCY DEVICES

High-efficiency toilets
Bathroom and kitchen faucet aerators
High-efficiency showerheads

Country Village Towers is comprised of two buildings made up of 184 apartment units. SUEZ completed a free water efficiency assessment of the property to identify ways to reduce water usage and related costs. The assessment made behavioral observations and measured all water fixtures and their actual and intended flow rates. Based on the findings, it was clear that the older, high-flow fixtures in place were wasting water and money.

CONSERVE SOLUTION

In July 2019, management executed an extensive water conservation project and replaced outdated toilets and showerheads. They also installed faucet aerators in every unit. Country Village Towers was able to offset costs of the project with rebates on new WaterSense labeled showerheads and toilets through SUEZ's conservation rebate program. SUEZ provided \$15 for every showerhead and \$100 for every toilet installed. This provided significant cost savings for their renovations. As a result Country Village Towers benefits from long-term savings through more efficient water management.
